

ADMINISTRATIVE - INTERNAL USE ONLY

28 October 1983

MEMORANDUM FOR: DD/OP/PA&E

FROM:

C/HRPS

SUBJECT: Potential Move Problems - HRPS

1. In response to your request, I see the following items as potential problem areas for HRPS when we move to

*Moving our HP 9845B Mini-Computer - This is our desk-top computer currently located in the ORD Dac, 501 Ames Building. Although it is a desk top model, it has a separate printer, plotter, and two disk drives that are run off of the basic terminal. These will have to be detached, moved, and reattached to the terminal and power sources.

*Moving our Delta Data Terminal and Disk Drives - I am told that this is on line with ODP. However, I don't want a replacement terminal w/o disk drives. I am now just starting to use my disk drive capability. Since there are not many disk drives around, it would seem that this terminal and/or disk drive will be physically moved. Obviously, if the secure line connections are delayed, we will be unable to use the terminal at all.

2. If either, or both of the capabilities represented in the above equipment is lost during the move, HRPS would be unable to perform many of our standard functions.
